

Normal Method Accuracy Compared With DF-FFT

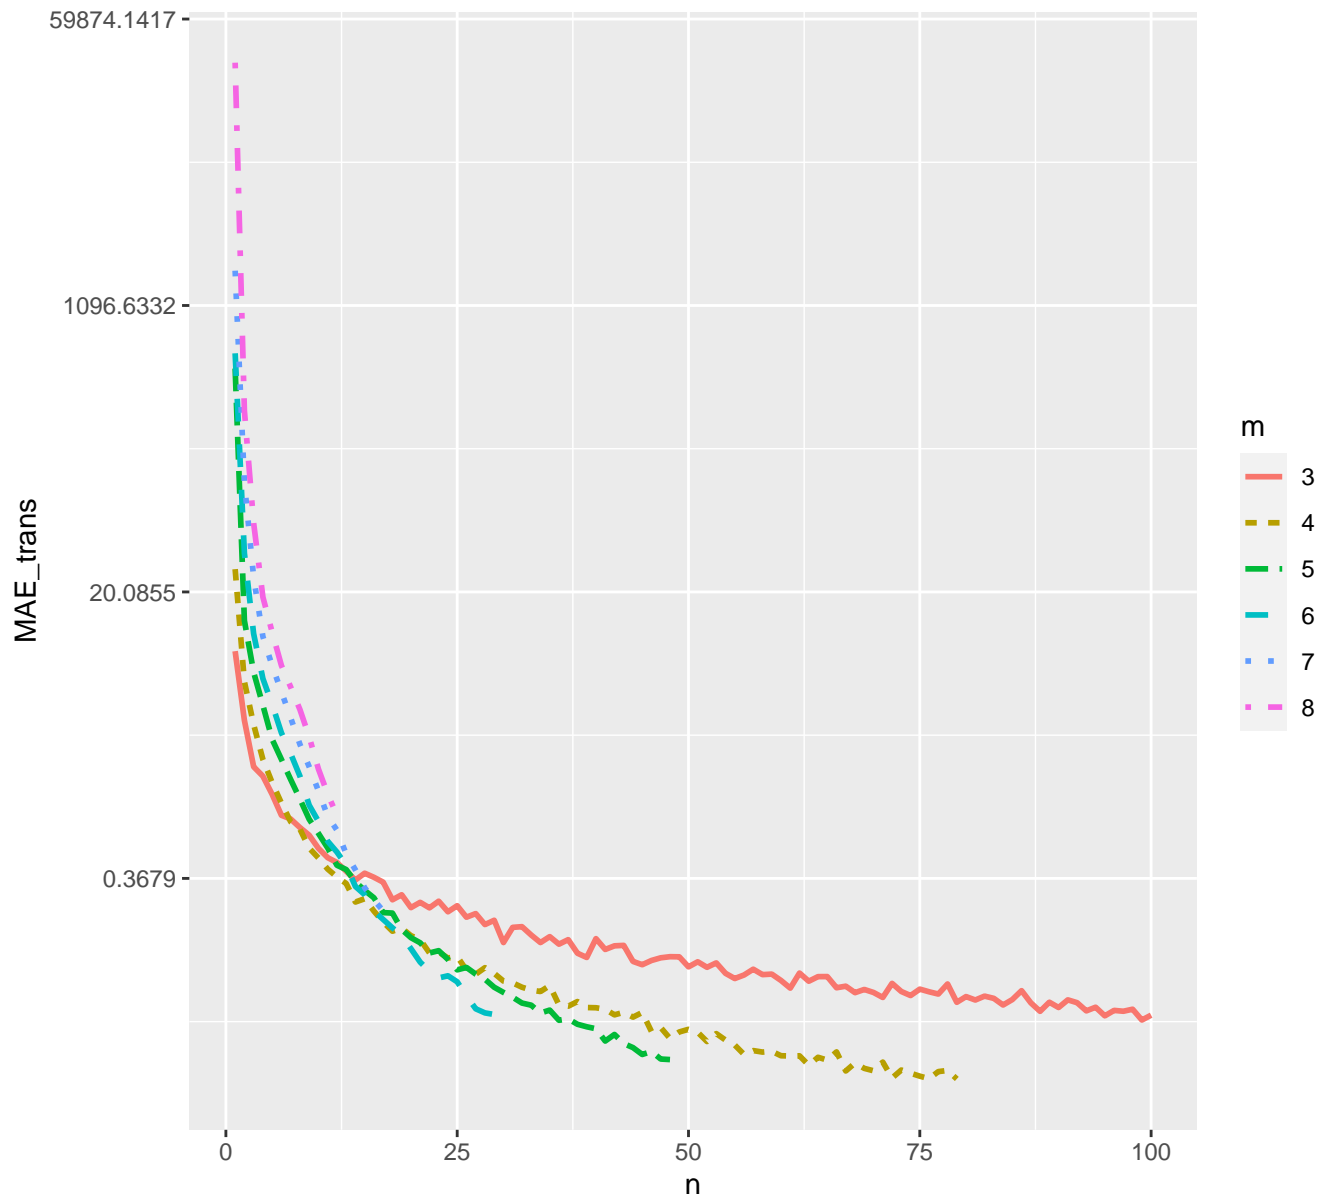

Use MAE as criterion

Different colors and types of lines representing different m . The MAE is under log transformation

Normal Method Accuracy Compared With DF-FFT

Use transfered MAE as criterion

Different colors and types of lines representing different m . The $MAE_{transferred}$ is under log transformation

Normal Method Accuracy Compared With DF-FFT

Use TAE as criterion

Different colors and types of lines representing different m . The TAE is under log transformation
